Data Visualization with Power BI and Tableau

Practical – I

Roll No.: T014	Name: Parth R. Kunkunkar
Class: TYIT	Batch: 1
Date of Assignment: 24/7/2026	Date/Time of Submission: 24/7/2026

Getting Started with Tableau and Building Basic Visualizations

a) Connect to a CSV dataset and explore the Tableau interface

b) Identify and differentiate Measures and Dimensions

→

green fields are continuous (usually measures) and blue fields are discrete (usually dimensions).

c) Convert fields between discrete and continuous and observe changes

Tables	
#	Customer Id
📅	Order Date
#	Order Id
Abc	Payment Method
Abc	Product Category
Abc	Region
Abc	Measure Names
#	Customer Rating

#	Quantity
#	Revenue
#	Unit Price
#	ecommerce_sales_analytics_5000....
#	Measure Values

d) Create and customize a basic bar chart

Profit Chart

e) Build a line chart for time-series analysis

f) Create a geographic map visualization

g) Combine multiple charts into a simple interactive dashboard

**Short Report**

The Ecommerce Sales Analytics dashboard helps understand the sales and discount trends in a simple way. It shows that 2022 had the highest discount percentage, while 2023 was almost the same. In 2024, the discount percentage dropped sharply. The dashboard also shows that discounts were given almost equally on all days of the week. Overall, the dashboard makes it easy to compare yearly discounts and understand sales trends, which can help businesses make better decisions.

Part C – Curiosity Question

Curiosity Question

Question:

Using a dataset of your choice (CSV format), create an interactive Tableau dashboard that effectively presents key insights from the data.

Requirements:

1. Import your own dataset into Tableau.

2. Identify appropriate **Dimensions** and **Measures**.

Tables

📅 Date

Abc Day of the Week

T|F Holiday Effect

Abc Product Category

Product ID

Abc Store ID

Abc Store Location

Abc *Measure Names*

Discount Percentage

Marketing Spend (USD)

Sales Revenue (USD)

Units Sold

Retail_sales.csv (Count)

Measure Values

3. Create at least **three different visualizations** (e.g., bar chart, line chart, map, pie chart, scatter plot, etc.).

4. Add at least **one filter** or interactive element to the dashboard.

5. Arrange the charts into a **single interactive dashboard** with a clear title.

6. Write **3–5 observations** explaining the insights gained from your dashboard.

→

1. 2022 has the highest discount percentage, followed closely by 2023.
2. 2024 shows a sharp drop in discount percentage compared to previous years.
3. Discounts are almost the same across all weekdays in 2022 and 2023.
4. The dashboard indicates a decreasing discount trend from 2022 to 2024.

Short Report

This Tableau dashboard shows the discount percentage for different years and days of the week using the retail sales dataset. It uses a bar chart, line chart, and bubble chart to make the data easy to understand. A year filter is also added so the data can be viewed for different years. The dashboard shows that 2022 had the highest discount percentage, 2023 was almost the same, and 2024 had a very low discount percentage. It also shows that the discount percentage was almost the same on all days of the week. Overall, the dashboard makes it easy to understand and compare discount trends over the years.
